
GLOBAL WARMING FREEZES UP

Posted by mready - 2006/02/10 17:14

This thread discusses the Content article: GLOBAL WARMING FREEZES UP

These are great idea's Jack, but will anyone listen and take action?

Wouldn't it be better to allow the earth to continue to regulate its own climate. Science insist that this planet is hundreds of millions of years old. In all that time, humans have been present for a moment. If the earth has managed thus far without our influence, why assume we can do it any better?
